## Octave Quick Reference Octave Version 3.0.0

## **Starting Octave**

octave	start interactive Octave session
${ t octave} \ file$	run Octave on commands in file
octaveeval	code Evaluate code using Octave
octavehelp	describe command line options

## **Stopping Octave**

quit or exit	$_{ m exit}$	Octave
--------------	--------------	--------

INTERRUPT	(e.g.	C-c) terminate current command
	and	return to top-level prompt

## **Getting Help**

$\mathtt{help}\ command$	briefly describe command
doc	use Info to browse Octave manual
doc command	search for command in Octave manual
lookfor $str$	search for command based on str

### Motion in Info

SPC or C-v	scroll forward one screenful
DEL or M-v	scroll backward one screenful
C-1	redraw the display

### Node Selection in Info

p	select the previous node
u	select the 'up' node
t	select the 'top' node
d	select the directory node
<	select the first node in the current file
>	select the last node in the current file
g	reads the name of a node and selects it
C-x k	kills the current node

select the next node

## Searching in Info

S	search for a string
C-s	search forward incrementally
C-r	search backward incrementally
i	search index & go to corresponding node
,	go to next match from last 'i' command

### **Command-Line Cursor Motion**

C-b	move back one character
C-f	move forward one character
C-a	move to the start of the line
С-е	move to the end of the line
M-f	move forward a word
M-b	move backward a word
C-1	clear screen, reprinting current line at top

## **Inserting or Changing Text**

M-TAB	insert a tab character
DEL	delete character to the left of the cursor
C-d	delete character under the cursor
C-v	add the next character verbatim
C-t	transpose characters at the point
M-t	transpose words at the point

#### surround optional arguments ... show one or more arguments

## Killing and Yanking

C-k	kill to the end of the line
С-у	yank the most recently killed text
M-d	kill to the end of the current word
M-DEL	kill the word behind the cursor
М-у	rotate the kill ring and yank the new top

### **Command Completion and History**

command completion and History			
TAB	complete a command or variable name		
M-?	list possible completions		
RET	enter the current line		
C-p	move 'up' through the history list		
C-n	move 'down' through the history list		
M-<	move to the first line in the history		
M->	move to the last line in the history		
C-r	search backward in the history list		
C-s	search forward in the history list		
$\texttt{history} \; \big[ \text{-q} \big] \; \big[ N \big]$	list $N$ previous history lines, omitting history numbers if $\neg q$		
$\verb history -w [file] $	write history to file (~/.octave_hist if no file argument)		
$\verb history -r  [file] $	<pre>read history from file (~/.octave_hist if   no file argument)</pre>		
edit_history lines	edit and then run previous commands from the history list		
run_history lines	run previous commands from the history list		
$\begin{bmatrix} beg \end{bmatrix} \begin{bmatrix} end \end{bmatrix}$	Specify the first and last history commands to edit or run.		
If beg is greater	than end, reverse the list of commands		
before editing. If end is omitted, select commands from			
beg to the end of the history list. If both arguments are			
· ·	previous item in the history list.		

#### Shell Commands

$\begin{array}{c} \operatorname{cd} \ dir \\ \operatorname{pwd} \end{array}$	change working directory to $dir$ print working directory
ls [options]	print directory listing
getenv (string)	return value of named environment variable
system (cmd)	execute arbitrary shell command string

#### Matrices

Square brackets delimit literal matrices. Commas separate elements on the same row. Semicolons separate rows. Commas may be replaced by spaces, and semicolons may be replaced by one or more newlines. Elements of a matrix may be arbitrary expressions, assuming all the dimensions agree.

L	x,	y,	]	enter	$\mathbf{a}$	row vector
	x;	y;	]	enter	a	${\rm column\ vector}$
Г	w,	x;	y, z	enter	a	2×2 matrix

## Multi-dimensional Arrays

Multi-dimensional arrays may be created with the *cat* or *reshape* commands from two-dimensional sub-matrices.

squeeze (arr)	remove singleton dimensions of the array.
ndims (arr)	number of dimensions in the array.
permute $(arr, p)$	permute the dimensions of an array.
ipermute $(arr, p)$	array inverse permutation.

shiftdim (arr, s) rotate the array dimensions. circshift (arr, s) rotate the array elements.

## **Sparse Matrices**

```
sparse (...) create a sparse matrix.

speye (n) create sparse identity matrix.

sprand (n, m, d) sparse rand matrix of density d.

spdiags (...) sparse generalization of diag.

nnz (s) No. nonzero elements in sparse matrix.
```

### Ranges

```
base: limit
base: incr: limit
Specify a range of values beginning with base with no
elements greater than limit. If it is omitted, the default
value of incr is 1. Negative increments are permitted.

Strings and Common Escape Sequences
A string constant consists of a sequence of characters enclosed
```

in either double-quote or single-quote marks. Strings in double-quotes allow the use of the escape sequences below.

//	a literal backslash
\"	a literal double-quote character
\'	a literal single-quote character
\n	newline, ASCII code 10
\t	horizontal tab, ASCII code 9

## **Index Expressions**

var (idx)	select elements of a vector
var ( $idx1$ , $idx2$ )	select elements of a matrix
scalar	select row (column) corresponding to
	scalar
vector	select rows (columns) corresponding to th
	elements of vector
range	select rows (columns) corresponding to the
	elements of range
:	select all rows (columns)

#### Global and Persistent Variables

global vari	Declare variables global.
grobar vari	Deciare variables global.
$global \ var1 = val$	Declare variable global. Set initial value.
persistent $var1$	Declare a variable as static to a function.
persistent $var1$ =	Declare a variable as static to a function
val	and set its initial value.
Global variables ma	y be accessed inside the body of a function
without having to b	e passed in the function parameter list

without having to be passed in the function parameter list provided they are declared global when used.

### **Selected Built-in Functions**

EDITOR Inf, NaN	editor to use with edit_history IEEE infinity, NaN
NA	Missing value
PAGER	program to use to paginate output
ans	last result not explicitly assigned
eps	machine precision
pi	$\pi$
1i	$\sqrt{-1}$
realmax	maximum representable value

realmin minimum representable value

Copyright 1996-2022 The Octave Project Developers Permissions on back

### **Assignment Expressions**

var = expr	assign expression to variable
var (idx) = expr	assign expression to indexed variable
var (idx) = []	delete the indexed elements.
$var \{idx\} = expr$	assign elements of a cell array.

## **Arithmetic and Increment Operators**

x + y	addition
x - y	subtraction
x * y	matrix multiplication
x .* y	element by element multiplication
x / y	right division, conceptually equivalent to (inverse (y') * x')'
$x \cdot / y$	element by element right division
$x \setminus y$	left division, conceptually equivalent to
	inverse (x) * y
$x \cdot \ y$	element by element left division
$x \hat{y}$	power operator
$x \cdot \hat{y}$	element by element power operator
- x	negation
+ x	unary plus (a no-op)
x ,	complex conjugate transpose
x .'	transpose
++ x ( x)	increment (decrement), return new value
x ++ (x)	increment (decrement), return $old$ value

## Comparison and Boolean Operators

These operators work on an element-by-element basis. Both arguments are always evaluated.

x < y	true if $x$ is less than $y$
$x \leq y$	true if $x$ is less than or equal to $y$
x == y	true if $x$ is equal to $y$
$x \ge y$	true if $x$ is greater than or equal to $y$
x > y	true if $x$ is greater than $y$
x != y	true if $x$ is not equal to $y$
x & y	true if both $x$ and $y$ are true
$x \mid y$	true if at least one of $x$ or $y$ is true
! bool	true if bool is false

## Short-circuit Boolean Operators

Operators evaluate left-to-right. Operands are only evaluated if necessary, stopping once overall truth value can be determined. Operands are converted to scalars using the all function.

x	&&	y	true if both $x$ and $y$ are true	
$\boldsymbol{x}$	$\Pi$	y	true if at least one of $x$ or $y$ is tr	rue

## Operator Precedence

Table of Octave operators, in order of increasing precedence.

; , =    &&	statement separators assignment, groups left to right logical "or" and "and"
&	element-wise "or" and "and"
< <= == >= > !=	relational operators
:	colon
+ -	addition and subtraction
* / \ .* ./ .\	multiplication and division
, .,	transpose
+ - ++ !	unary minus, increment, logical "not"
^ .^	exponentiation

#### Paths and Packages

path	display the current Octave function path.
pathdef	display the default path.
addpath (dir)	add a directory to the path.
EXEC_PATH	manipulate the Octave executable path.
pkg list	display installed packages.
pkg load pack	Load an installed package.

#### Cells and Structures

$var.field = \dots$	set a field of a structure.
$var\{idx\} = \dots$	set an element of a cell array.
cellfun $(f, c)$	apply a function to elements of cell array.
fieldnames(s)	returns the fields of a structure.

### **Statements**

for identifier = expr stmt-list endfor Execute stmt-list once for each column of expr. The variable identifier is set to the value of the current column during each iteration.

while (condition) stmt-list endwhile Execute stmt-list while condition is true.

Dreak	exit innermost 100p
continue	go to beginning of innermost loop
return	return to calling function

# if (condition) if-body [else else-body] endif

Execute if-body if condition is true, otherwise execute else-

if (condition) if-body [elseif (condition) elseif-body] endif Execute if-body if condition is true, otherwise execute the elseif-body corresponding to the first elseif condition that is true, otherwise execute else-body.

Any number of elseif clauses may appear in an if

#### ${\tt unwind\_protect\_body\ unwind\_protect\_cleanup\ } cleanup\ {\tt end}$

Execute body. Execute cleanup no matter how control exits

try body catch cleanup end Execute body. Execute cleanup if body fails.

### Strings

strcmp(s, t)	compare strings
strcat $(s, t, \ldots)$	concatenate strings
regexp (str, pat)	strings matching regular expression $$
regexprep (str. pat. rep)	Match and replace sub-strings

## **Defining Functions**

```
function [ret-list] function-name [(arg-list)]
  function-body
endfunction
```

ret-list may be a single identifier or a comma-separated list of identifiers delimited by square-brackets.

arg-list is a comma-separated list of identifiers and may be empty.

### **Function Handles**

str2func (str)	Create a function handle from a string.
functions (handle)	Return information about a function
	handle.
<pre>func2str (handle)</pre>	Return a string representation of a
	function handle.
handle (arg1,)	Evaluate a function handle.
feval (func, arg1,	Evaluate a function handle or string,
)	passing remaining args to func
Anonymous function	handles take a copy of the variables in

O(var1, ...) expr Define an anonymous function handle.

Define a function handle to func.

#### Miscellaneous Functions

the current workspace.

rows (a)

eval (str)	evaluate $str$ as a command
error (message)	print message and return to top level
warning (message)	print a warning message
clear pattern	clear variables matching pattern
exist (str)	check existence of variable or function
who, whos	list current variables
whos $var$	details of the variable var

return number of rows of a

### Basic Matrix Manipulations

columns (a) all (a) any (a)	return number of columns of $a$ check if all elements of $a$ nonzero check if any elements of $a$ nonzero
diag $(v, k)$ linspace $(b, l, n)$	return indices of nonzero elements order elements in each column of $a$ sum elements in columns of $a$ product of elements in columns of $a$ find minimum values find maximum values find remainder of $x/y$ reformat $a$ to be $m$ by $n$ create diagonal matrices create vector of linearly-spaced elements create vector of log-spaced elements create $n$ by $m$ identity matrix create $n$ by $m$ matrix of ones create $n$ by $m$ matrix of zeros create $n$ by $m$ matrix of random values create $n$ by $m$ matrix of random values

## Linear Algebra

chol (a)	Cholesky factorization
det (a)	compute the determinant of a matrix
eig (a)	eigenvalues and eigenvectors
expm (a)	compute the exponential of a matrix
hess (a)	compute Hessenberg decomposition
inverse (a)	invert a square matrix
norm(a, p)	compute the $p$ -norm of a matrix
pinv (a)	compute pseudoinverse of $a$
qr (a)	compute the QR factorization of a matrix
rank (a)	matrix rank
sprank (a)	structural matrix rank
schur (a)	Schur decomposition of a matrix
svd (a)	singular value decomposition
svl(a, b, c)	solve the Sylvester equation

#### Equations, ODEs, DAEs, Quadrature

\*fsolve solve nonlinear algebraic equations

\*lsode integrate nonlinear ODEs
\*dass1 integrate nonlinear DAEs
\*quad integrate nonlinear functions

perror (nm, code) for functions that return numeric codes,

print error message for named function

disp (var)

display value of var to screen

and given error code

\* See the on-line or printed manual for the complete list of arguments for these functions.

### Signal Processing

fft (a) Fast Fourier Transform using FFTW

hamming (n) return Hamming window coefficients hanning (n) return Hanning window coefficients

### Image Processing

colormap (map) set the current colormap

gray2ind (i, n) convert gray scale to Octave image image (img, zoom) display an Octave image matrix imagesc (img, zoom) display scaled matrix as image

 $\begin{array}{lll} \text{imread } \textit{(file)} & \text{load an image file} \\ \text{imshow } \textit{(img, map)} & \text{display Octave image} \\ \text{imshow } \textit{(i, n)} & \text{display gray scale image} \\ \text{imshow } \textit{(r, g, b)} & \text{display RGB image} \\ \end{array}$ 

imwrite (img, file) write images in various file formats convert Octave image to gray scale ind2rgb (img, map) convert indexed image to RGB rgb2ind (r, g, b) convert RGB to Octave image

save a matrix to file

### C-style Input and Output

fopen (name, mode) open file name fclose (file) close file

printf (fmt, ...) formatted output to stdout
fprintf (file, fmt, ...) formatted output to file

sprintf (fmt, ...) formatted output to string scanf (fmt) formatted input from stdin fscanf (file, fmt) formatted input from file scanf (str, fmt) formatted input from string fgets (file, len) read len characters from file

fflush (file) flush pending output to file
ftell (file) return file pointer position
frewind (file) move file pointer to beginning
freport print a info for open files
fread (file, size, prec) read binary data files

fread (file, size, prec) read binary data files fwrite (file, size, prec) write binary data files

feof (file) determine if pointer is at EOF

A file may be referenced either by name or by the number returned from fopen. Three files are preconnected when Octave starts: stdin, stdout, and stderr.

# Other Input and Output functions

 $\begin{array}{lll} \textbf{save} \ \textit{file} \ \textit{var} \ \dots & \textbf{save} \ \textit{variables} \ \textit{in} \ \textit{file} \\ \textbf{load} \ \textit{file} & \textbf{load} \ \textit{variables} \ \textit{from} \ \textit{file} \\ \end{array}$ 

#### **Polynomials**

compan (p)companion matrix conv(a, b)convolution deconv(a, b)deconvolve two vectors poly (a) create polynomial from a matrix polyderiv (p) derivative of polynomial polyreduce (p) integral of polynomial polyval (p, x)value of polynomial at x polyvalm (p, x)value of polynomial at x roots (p) polynomial roots

partial fraction expansion of ratio a/b

#### Statistics

residue (a, b)

 $\begin{array}{lll} \text{corrcoef} \; (x, \, y) & \text{correlation coefficient} \\ \text{cov} \; (x, \, y) & \text{covariance} \\ \text{mean} \; (a) & \text{mean value} \\ \text{median} \; (a) & \text{median value} \\ \text{std} \; (a) & \text{standard deviation} \\ \text{var} \; (a) & \text{variance} \end{array}$ 

### **Plotting Functions**

plot (args) 2D plot with linear axes plot3 (args) 3D plot with linear axes

line (args) 2D or 3D line patch (args) 2D patch

 semilogx (args)
 2D plot with logarithmic x-axis

 semilogy (args)
 2D plot with logarithmic y-axis

 loglog (args)
 2D plot with logarithmic axes

bar (args) plot bar charts stairs (x, y)plot stairsteps stem (x, y)plot a stem graph hist (y, x)plot histograms contour (x, y, z)contour plot title (string) set plot title axis (limits) set axis ranges xlabel (string) set x-axis label vlabel (string) set v-axis label zlabel (string) set z-axis label text (x, y, str)add text to a plot legend (string) set label in plot key

grid [on off] set grid state
hold [on off] set hold state

ishold return 1 if hold is on, 0 otherwise

mesh (x, y, z) plot 3D surface

meshgrid (x, y) create mesh coordinate matrices
